

Amendments to the Specification:

Please replace the Title of the Invention with the following:

-- Computer and Microprocessor Control Units That Are Inaccessible from the Internet--

Please replace the paragraph at page 35, line 27 to page 36, line 10 with the following:

--Preferably, as shown in Figure 10C, microprocessors 90 are expected to integrate most or all of the other necessary computer components (or their present or future equivalents or successors), like a PC's memory (RAM 66, graphics 82, sound 83, power management 84, network communications 85, and video processing 86, possibly including modem 87, flash bios 88, and other components or present or future equivalents or successors) and internal bus, on a single chip 90 (silicon, plastic, or other), known in the industry as "system on a chip". Such a PC ~~micro-chip~~ microchip 90 preferably has the same architecture as that of the PC 1 shown above in Figure 10A: namely, a control and/or processing unit 93 and one or more slave processing units 94 (for parallel or multitasking processing by either the PC 1 or the Network 2), preferably separated by a firewall 50 and preferably connected to a network computer 3 and the Internet 3 and successors like the MetaInternet.--

Please replace the Abstract with the enclosed Abstract provided on a separate sheet.
